

## Rodent Removal Preparation Checklist

To ensure the effectiveness of the rodent treatment, the property must be fully prepared prior to service. Please follow the checklist below to complete all necessary preparations before the technician arrives.

- Clean kitchen floors regularly after cooking as grease and oil can sustain an entire mouse population.
- Vacuum and clean around all eating areas, especially in the dining room and living room.
- Clean especially around stoves and fridges.
- No food can be left out on shelves, cupboards, or pantries- unless it is canned goods or sealed in hard containers.
- All food must be stored in hard metal or plastic containers.
- Do not leave any pet food out.
